Work experience

2024 – 2025 **Web Development & UI/UX Design** (Freelance).

- Designed and developed custom websites for clients from scratch — from visual concept to deployment.
- Created UI/UX designs in Figma: wireframes, prototypes, and polished mockups tailored to brand identity.
- Implemented responsive, pixel-perfect layouts using HTML5, CSS3/SCSS, and JavaScript.
- Managed client communication, gathered requirements, delivered iterative updates, and met deadlines independently.

2025 – present **Frontend Developer.** Startup Project (Task Management Mobile App).

- Developed a mobile application for task planning and life management using React Native with functional components, hooks, and expo-router for navigation.
- Implemented user authentication with registration, login, email verification.
- Added client-side form validation (e.g., email format check before submission).
- Wrote unit and integration tests using Jest and testing-library.
- Collaborated in a team using GitHub.

Education

2023 - present **BS in Information Technologies and Management.** Saint-Petersburg State Institute of Technology, Saint Petersburg, Russia.

Skills

OS: Windows, Linux.

Programming: JavaScript, TypeScript.

Frontend Development: HTML5, CSS3/SCSS, React Native (expo-router), React.js (functional components, hooks), Angular (Component-based architecture, Services, Routing), RxJS.

Backend: Express.js (Node.js), REST API (axios), Docker.

Databases: MySQL (creating a database, simple and medium complexity queries).

Testing: Jest (unit, integration tests), testing-library.

Development Tools: VS Code, Git/GitHub, Figma.

Projects

- **TourismFullstack.** A full-stack web application for managing client bookings, tours, hotels, and transport. Implemented functionality for adding, editing, and deleting client profiles directly on the homepage. Users can select a country, choose a tour, pick transport type, and book hotels rated from 1 to 5 stars with detailed descriptions and room layouts. The interface dynamically updates based on

user input, providing a seamless experience. All data is stored in a centralized MySQL database.

Stack: Node.js (Express) for the backend and React.js for the frontend.

- **Room Booking System.** An application for booking meeting rooms. The main page displays room cards with their status (available/occupied) and current booking times. A convenient order form with date and time verification has been created. A link to a page with a detailed description of the room has been implemented, where you can view all amenities and features. A convenient booking form with time verification has been created. **Stack:** Angular 18, Angular Material 3, SCSS.
- **Equipment Management & Analytics System.** Full-stack app for monitoring industrial equipment and analyzing logs in real time. The main page features an interactive dashboard with device cards, where users can toggle equipment status (available / in use) via PATCH requests to the API. An analytics module includes a calendar view with data filtering by time period (day, week, month). The app also has a detailed routing system for viewing device specs, along with error handling and dynamic redirects. **Stack:** Angular + SCSS (frontend), Node.js / Express (backend). Deployed on GitHub Pages (client) and Render (server).
