Education

2023 - present BSc in Information Technologies and Management. [Saint-Petersburg State Institute of Technology](#), Saint Petersburg, Russia.
(Expected: 2027)

Work Experience

Jan 2025 - present **Junior Frontend Developer at the [TE-Manager](#), Russia**

- 3,000+ downloads — shipped a React Native task-planning app (Expo Router) with 10+ screens, dark theme, and custom animations.
- Implemented end-to-end authentication across 3 flows (registration, login, email code verification), with client-side validation to catch input errors before submission.
- Introduced centralized state management, reducing data-sync inconsistencies as the screen count and feature set grew.
- Covered core user flows (auth, form validation) with unit and integration tests in Jest and testing-library.
- Collaborated in a team using GitHub.

Feb 2024 - Jan 2025 **Web Development & UI/UX Design, Russia • Freelance**

- Designer and built custom websites for clients end-to-end, from concept in Figma to deployment
- Created UI/UX designs in Figma — wireframes, prototypes, and polished mockups — tailored to each client's brand identity, validating the design before writing code.
- Implemented responsive, pixel-perfect layouts with HTML5, CSS3/SCSS, and JavaScript, and optimized assets and load performance where needed.
- Owned client communication independently: gathered requirements, delivered iterative updates, and met agreed deadlines across multiple projects

Skills

Languages:	Russian – native, English – B1 (Intermediate)
Communication skills:	Strong client communication and collaboration skills from freelance web development — gathering requirements from clients, and working with cross-functional teams via GitHub. Experienced in diagnosing and resolving frontend bugs and configuration issues through testing and debugging.
OS:	Windows, Linux, macOS
Programming:	JavaScript, TypeScript
Frontend Development:	React.js, React Native (Expo, Expo Router); HTML5, CSS3/SCSS
Backend:	Node.js (Express), Next.js — REST API integration (Axios), Docker
Databases:	MySQL, SQL — schema design, queries of simple to medium complexity
Testing:	Jest, testing-library — unit and integration testing
Version control systems:	Git — collaborative code management, issue tracking, code review and branch management
Development Tools:	Figma, Tilda, VS Code

Projects

[TourismFullstack - Full-Stack Booking Platform](#) · React.js · Node.js (Express) · MySQL

- Architected and built a full-stack booking platform solo — frontend, backend, and database — covering the complete flow: country → tour → transport → hotel selection (1–5 stars).
- Designed a dynamically updating UI that re-renders booking options in real time based on prior user input, with a normalized MySQL schema behind bookings, tours, hotels, and transport.
- Built full CRUD for client profiles directly on the homepage, backed by a centralized database.

[Speaking Trainer - English Exam Practice Platform](#) · React.js · TypeScript · Next.js (App Router)

- Owned the entire frontend of a team-built exam simulator for Russia's national English exam (EGE), working within a defined frontend/backend split.
- Built a real-time exam flow with timers, a microphone-check screen, and in-browser audio recording with direct upload — handling browser media APIs and async upload state.
- Designed an offline mode keeping the app usable when the backend is unavailable.
